

Chilli Challenges 1.2.21

Hot

Ron thinks he has £13

Is he correct?

Explain your answer.

Spicy

Explain the mistake.

£2, £4, £6, £7, £8, £10

Answers

Hot

No, because three
£2 coins make £6

£10 and £6 is
equal to £16

He has mistaken
his £2 coins for £1
coins.

Spicy

£7 is the mistake.
It is an odd
number. The 2
times table are all
even.

When counting in
£2s, we would say

£2, £4, £6, £8,
£10
